# Faculty day October 23

Subheader if needed here

Presented by:  
**Dr Manjiri Bodhe**

# Welcome!

Welcome to all our trainers and especially to any new trainers for whom this is their first time attending.

This is the second of our faculty days, our spring faculty day being normally virtual.

Once again a chance to network , chat to colleagues and solve all the problems!

## Blue sky thinking

The theme of my talk today is what do we want for general practice.

The push and pull between what is needed vs what is .available

# Current news

## Sexual harassment in medicine

[Sexual assault in surgery: a personal perspective - A letter to the authors | The Bulletin of the Royal College of Surgeons of England \(rcseng.ac.uk\)](#)

Recent study, known and swept under carpet? In

2022, there were over 18.9 thousand female General Practitioners in England compared to approximately 16.8 thousand male GPs.

[An open letter to the medical profession in Wales \(rcgp.org.uk\)](#)

- The UK medical workforce headcount is growing, with large increases in international medical graduates (IMGs) whose primary medical qualification (PMQ) is from outside the UK and European Economic Area (EEA).
- The number of IMGs has increased by 40% in the last five years at a time when the number of UK graduates in the workforce increased by 10%
- Of the doctors who joined the workforce in 2021, half (50%) were IMGs and 39% were UK graduates.
- The workforce will grow by a third by 2030 compared to 2021 if current trends continue. However, if the rate of IMGs joining goes back to pre-2017 levels, there will be 23,000 fewer doctors in 2030. This highlights the importance of IMGs to the UK workforce.
