## Introduction

1. Cardiovascular disease (CVD) is the second most common cause of premature death in England affecting seven million people. The NHS Long Term Plan<sup>1</sup> aims to reduce CVD mortality and morbidity, tackle inequalities and deliver a genuine shift towards prevention. High blood pressure (BP) or hypertension is the single biggest risk factor for CVD (Global Burden of Disease Report, 2017) and there are an estimated 5.6 million people with undiagnosed hypertension across the country (Public Health England).
2. High BP is a major risk factor for the development of atrial fibrillation (AF) which increases the risk of a stroke by five times. High BP is also a significant contributor to health inequalities; residents of the most deprived areas in England are 30% more likely to have high BP compared to those in the least deprived areas. The risk factors for developing hypertension can be categorised as modifiable or non-modifiable. Modifiable risk factors include lack of physical activity, being overweight, high alcohol intake, high salt intake, high cholesterol, smoking and stress. Non-modifiable risk factors include family history, race and age.
3. A future opportunity for NHS dental practitioners may be the emerging evidence of a possible association between periodontal disease (PD) and atherosclerotic vascular disease (ASVD). (Sanz 2020<sup>2</sup>), (Herrera 2023<sup>3</sup>) (Lockhart 2012<sup>4</sup>), (Dietrich 2017)<sup>5</sup>. Lockhart conducted a systemic review and concluded that the literature indicates an association between PD and ASVD independent of known confounders.
4. There was an average of 25.36 million unique presentations by the population at English NHS dental surgeries between 2015/16 and 2019/2020<sup>6</sup> for all ages and 12.06 million for the same period for people aged 40 years and older. This provides an opportunity for NHS dentists in England to case find people with risk factors for CVD on an opportunistic basis within patients visiting their surgeries in line with HEE advice to make every opportunity count<sup>7</sup>.

## Section 1: Aims and objectives

5. The aims and objectives of this service are to:

- Implement an NHS dental practice model that can case find people over the age of 40, with high BP (who have previously not had a confirmed diagnosis of hypertension).
- Promote healthy behaviours to patients with brief lifestyle interventions and signposting to self-management resources.
- If the BP is found to be elevated the dental practice refer in line with the guidance provided within this SOP.

## Section 2: Service description and pathway

6. The service is free of charge to all users. The service process map / pathway is illustrated in Appendix 1.

### Inclusion criteria

- Adults who are 40 years old or over without a current diagnosis of hypertension and have not had a blood pressure check within the past 2 years

### Exclusion criteria

- Patients who are unable to give consent to participate, or
- Patients under the age of 40 years, or
- Patients with known hypertension, or
- Patients who have had their BP read by a healthcare provider in the last 3 months

7. The dental provider must ensure the service is accessible, appropriate, and sensitive to the needs of all patients.

8. No eligible patient shall be excluded or experience particular difficulty in accessing this service, with regards to protected characteristics or age (outside of the inclusion criteria).

9. Any patient who is identified as suitable to be included under the criteria but where the smallest / largest cuff available does not fit and therefore an accurate BP cannot be obtained, should be directed to their GP.

### Identification of patients

10. In order for the service to be a success, the whole NHS dental practice team will need to proactively identify potential patients who meet the inclusion criteria.

11. This will include:

- Reviewing patient appointment lists to identify patients over 40 without a current diagnosis of hypertension
- Proactively and sensitively initiating discussions with eligible patients;
- Displaying posters within the dental practice;
- Providing a patient leaflet with details of service

12. Dental practices will be provided with posters for display within the dental practice, and with other materials to support user engagement.

13. The relevant dental team is informed of patients who meet eligibility criteria who review list and confirm patient eligibility.

## **Patient consultation**

14. The trained dental practice team member will explain the service to the patient and gain their consent.

## **No consent**

15. Patient records updated to note conversation and refusal of consent.

## **Consent**

## **Clinical interaction**

16. The trained dental practice team member will then conduct a face-to-face consultation in the dental practice consultation room or other suitable location.

17. If within surgery, the patient is moved to the non-dental chair. Where any dental treatment provided has been invasive patient given time to recover.

18. The staff member will take BP measurement using the recommended equipment and following best practice as described by operational training (see appendix 2).

## **BP Recording Key Steps**

- Palpate a radial pulse
- Seat the patient properly – upright chair with supported back & not cross legged – patient feet flat on the ground.
- If possible 30 mins without caffeine or cigarettes
- Don't chat or move around as patient's BP may be affected.
- Pop cuff over the arm – snugly and fasten with Velcro
- Run tube over the centre of the arm
- Check legs not crossed
- Press button
- Some monitors will take 3 readings 15 secs apart and give an average others will take a single reading – take three readings and record the average.

## **Discussion**

19. The dental practice team member will discuss the results with the patient and complete the appropriate next steps (see section 3 below).

20. A patient leaflet will be provided to the patient as part of the consultation and will include where they can document their BP test results. The information can be completed electronically by the team member and emailed to the patient if this is preferred.

21. Patient record updated.

### Section 3: Dental clinic outcomes pathways

22. All readings to be taken from the BP equipment and recorded in patient notes and recording template for evaluation.

This information should also be forwarded to the patient's GP via nhs.net for the patient's GP record.

#### **Blood Pressure (BP) measurement outcomes**

a) Normal clinic BP – Between 90/60mmHg and 139/89mmHg recorded by monitoring equipment

- No action required in relation to BP
- Advised to have BP checked within 5 years
- Brief interventions on smoking cessation/lifestyle choices if relevant.
- Patient dental record updated and “My Blood Pressure Results” slip detailing their readings will be completed for the patient to take away.
- Advise patient to inform GP practice
- Update recording template for evaluation.

b) High clinic BP - 140/90mmHg or higher recorded by monitoring equipment

- Clinic reading is repeated. If second measurement is substantially different from the first, repeat the blood pressure reading again (maximum three times in total).
- Record the lower of the last 2 measurements as clinic blood pressure.
- Clinic blood pressure is between 140/90mmHg and 179/119mmHg
  - Patient consents to Pharmacy Referral – Into the Hypertension Case Finding Blood Pressure Check Service.
  - Identify patients chosen/closest community pharmacy that provides the service using [Find a pharmacy that offers free blood pressure checks - NHS \(www.nhs.uk\)](http://www.nhs.uk).
  - Email a referral to the Community Pharmacy
  - Hypertension detection will be undertaken by local pharmacy including potential completion of Ambulatory Blood Pressure Monitoring (ABPM) if appropriate.
  - Inform GP
- If patient refuses, still inform GP via nhs.net of reading and patient refusal.
- Patient dental record updated and “My Blood Pressure Results” slip detailing their readings will be completed for the patient to take away.
- Update recording template for evaluation
- Make one follow up contact with the patient to confirm that they have made the appropriate appointments and to find out the outcome.

c) Very high clinic BP of 180/120mmHg or higher recorded by monitoring equipment

- Follow very high BP pathway as advised by local system. (See appendix 1)
- Inform GP
- If patient refuses, still inform GP via nhs.net of reading and patient refusal.
- Patient dental record updated and “My Blood Pressure Results” slip detailing their readings will be completed for the patient to take away. Advise the patient to contact the practice straight away as they need to be seen within 2 – 3 days.
- Update recording template for evaluation
- Make one follow up contact with the patient to confirm that they have made the appropriate appointments and to find out the outcome.

d) Low clinic BP of 90/60mmHg or lower recorded by monitoring equipment

- Patients with dizziness, nausea or fatigue refer to Pharmacy taking part in the scheme
- Asymptomatic patients advised to have BP checked within 5 years
- Brief interventions on smoking cessation/lifestyle choices if relevant.
- Patient dental record updated and “My Blood Pressure Results” slip detailing their readings will be completed for the patient to take away.
- Inform GP
- Update recording template for evaluation
- Make one follow up contact with the patient to confirm that they have made the appropriate appointments and to find out the outcome, if appropriate.

### **Standard dental intervention for smoking cessation**

23. Brief intervention to support smoking cessation behaviour change if appropriate, in line with standard dental service.

### **Patients follow up**

24. Where the patient has been detected as having a high BP reading and referred to community pharmacy for further testing or a very high BP and sought urgent care, the dental practice will contact the patient within 2 weeks of the results being calculated at the practice. The contact is to determine whether the patient has completed the community pharmacy appointment/urgent intervention, made the appropriate appointment with GP/healthcare professional or if they have received a diagnosis to populate the data collection process. This will aid the evaluation of the pilot.

## Section 4: Practice set up and equipment

### Practice set up

25. When a practice has been identified as participating in this service the practice will prepare by completing the following:

- Store template documents (electronically and hard copy) for use with patients and referrals to GP practices
- Place posters in the waiting areas
- Patient leaflets available
- Ensure clinic and home BP monitoring equipment is accessed

Please note that the priority for the practice remains the oral health of their patients so the Hypertension case finding pilot should not impact the practice's capacity to deliver dental services.

### Staff training

26. When a practice has been identified as participating in this service the practice will identify the relevant staff members who will be participating in the service. These members of the dental team will undertake training in:

- Use of clinic BP machine and how to take BP
- How to calculate which size cuff is required
- Use of home monitoring BP machine and how to provide instructions to patients
- How to gain valid consent within scope of practice and deliver results to patients
- Knowledge of brief interventions available for smoking cessation

27. Relevant training materials provided in Appendix 2

### Equipment

28. Clinic BP monitors (appropriate number required) – BIHS validated monitors are listed here [For Specialist Use - British and Irish Hypertension Society | Registered UK Charity No. 287635 \(bihsoc.org\)](#)

This website contains a spreadsheet with information about approved BP monitors. The monitors detailed in the 'Home' tab will be appropriate for this service and must include an upper arm cuff (not wrist cuff).

29. The practice is to follow manufacturer's instructions in relation to calibration and upkeep.

## Section 5: Evaluation

30. To enable evaluation of the effectiveness of this service and to support service improvement, practices should record outputs of this service.

31. This should include:

- a) Number of interventions delivered, and
- b) The number of resulting hypertension diagnoses.

32. To enable an evaluation of the service provided the participating dental practice will provide an anonymised data set to the national on the provided format (see template below)

33. Data collection records should be kept safe and only on surgery hard drives. The “clinical Site” spreadsheet remains at the practice and is deleted at the end of the programme. Only the “uploaded” spreadsheet is shared. This contains no patient identifiable information. The data collection templates are attached:

34. Template for clinical site

Microsoft Excel  
Worksheet

35. Template to be submitted to the ICB on a monthly basis (no patient identifiable information)

Microsoft Excel  
Worksheet

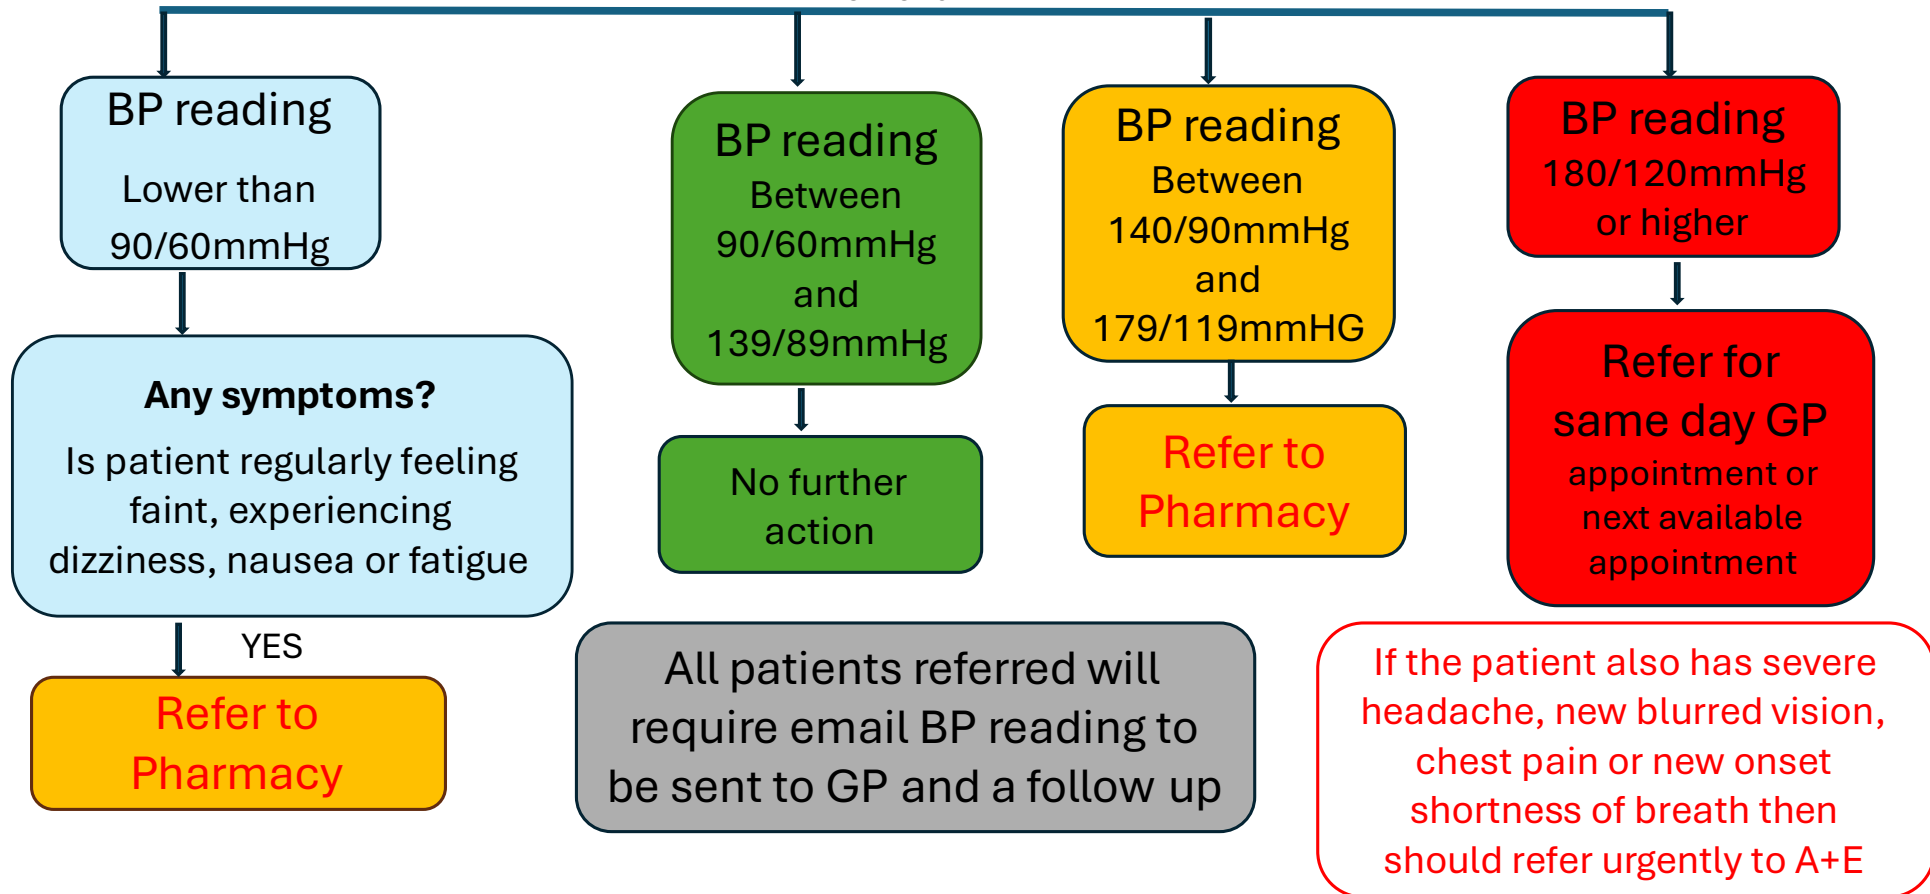

The ICB information should be submitted along with an invoice requesting payment. Details of the process are contained in Appendix 14.

Appendix 1: Clinical Pathway

Patient - inclusion criteria met and consents to take part

Over 40 years of age with no current diagnosis of hypertension

Flowchart

## Appendix 2: Training materials, equipment and resources

### How to check your BP using a BP machine -

[Manage your blood pressure at home - BHF](#)

[https://www.nice.org.uk/guidance/CVD\\_prevention](https://www.nice.org.uk/guidance/CVD_prevention)

<https://www.nhs.uk/conditions/obesity/>

### Equipment

Monitors are validated by the British and Irish Hypertension Society and the validated ones are listed here <https://bihsoc.org/bp-monitors/>

1. In clinic BP monitoring machine and appropriate size cuff
  - a. Omron X7 or equivalent
2. At home BP monitoring machine
  - a. Omron M2 or equivalent

### Cleaning and disinfection of BP Monitor

WatchBP device and  
Cuff cleaning and Disi

### Appendix 3: Suggested wording to inform patient prior to appointment

Your dental team are taking part in a pilot in offering an opportunity for some patients to have their blood pressure measured at their dental appointment.

It will not cost you anything.

At your dental appointment, you may be offered the opportunity to have your Blood Pressure taken. If appropriate, your doctor will be informed so that they can undertake any tests required to diagnose high blood pressure and treat it if necessary.

Why measure Blood Pressure? Blood Pressure is the pressure of blood in the arteries. If it is too high over a period of time and is not treated, you will be more at risk of having a stroke or heart attack. High blood pressure often has no symptoms which is why many people do not know they have it. Your doctor can help you reduce high blood pressure.

You do not have to take this opportunity if you do not want to, and it will not make a difference to your dental treatment if you decide not to. If you have already been diagnosed with high blood pressure or Atrial Fibrillation you will not be offered the opportunity. A member of your dental team will be able to answer some of the questions you may have regarding this opportunity.

A surgery poster will also provide information about the service; attached:

#### Surgery poster

Dental Practice  
Poster NHS logo PD

The poster includes a QR code which enables patients to provide feedback about their experience of the service. This information will be returned to the ICB to support evaluation of the pilot.

## Appendix 4: Consent Narrative

We are taking part in a pilot programme to help detect high blood pressure in patients over the age of 40 within a dental practice setting. You do not have to take this opportunity if you do not want to and will not make a difference to your dental treatment if you decide not to. If you have already been diagnosed with high blood pressure or Atrial Fibrillation you will not be offered the opportunity.

If you do take the offer up it will not cost you anything. We will not be able to diagnose High Blood Pressure, only get an indication that a referral to your pharmacy will be required for further tests. We will carry out the referral for you. During your case finding session you will have the opportunity to have your blood pressure taken. Your doctor will be informed. Why measure Blood Pressure? Blood Pressure is the pressure of blood in the arteries. If it is too high over a period of time and is not treated, you will be more at risk of having a stroke or heart attack. High blood pressure often has no symptoms which is why many people do not know they have it. Your doctor can help you reduce high blood pressure

## Appendix 5: Communication examples - Answering patient queries

Q: If I need my blood pressure taking, why don't I just go and see my GP?

A: We are offering you the opportunity to have your blood pressure readings taken here. The service is free and if we need to, we can contact your GP. Your GP will know about this programme.

Q: You say I need 7-day readings – does this mean I have heart problems?

A: No, this is your reading from today and because this is over the programme threshold we need to follow the programme guidance and ask you to follow up with a community pharmacist to take readings over a 7-day period.

Q: Why are you sending me to the GP or A&E?

A: The blood pressure reading we have taken today is above the threshold and we need to follow the programme guidance. This doesn't mean you have heart problems, but it does mean that we need to get this checked out for you quickly.

### Patient leaflet

Adobe Acrobat  
Document

### Translated BP Information

<https://www.bloodpressureuk.org/resources/publications/translated-blood-pressure-information/>

## Appendix 6: Suggested wording to be added to Dental Clinical Records

### Consent & Reading

Consent given for CVD case finding

BP reading taken ? /?

*Informed that reading is only a single measurement at this point and does not indicate any diagnosis.*

Advised reading taken does not meet referral threshold agreed with the ICB and requires no follow up.

### OR

Advised pharmacy referral required as initial reading meets the threshold agreed with the ICB.

*Informed that reading is only a single measurement at this point and does not indicate any diagnosis.*

Given leaflet and referred to community pharmacy for follow up.

### OR

The patients reading meets the threshold agreed with the ICB for referral as per ICB Urgent pathway. *Informed that reading is only a single measurement at this point and does not indicate any diagnosis and includes, where appropriate, name of GP referral, date and time of GP referral via NHS .net.*

### Diagnosis Record

Diagnosis of hypertension confirmed by GMP/Patient.

### OR

No CVD diagnosis confirmed by GMP /Patient

## Appendix 7: Suggested wording for patient “My Blood Pressure Results” slip

Thank you for having your Blood Pressure today.

Your reading is ...../ .....mmHG

### Outcome

- No Further Action – you should have another reading taken within 5 years. It would be useful to share the result with your doctor or other healthcare professional when you attend your practice for a future appointment.
- Referral Made to Community Pharmacy
- Advised Needs Urgent GP appointment or to contact 111. You should contact your practice straight away as you will need to be seen within 2 – 3 days.

## Appendix 8: Standardised E-mail to Community Pharmacy to make referral.

Date:

Patient Name:

Patient Contact Information:

Confirm patient offered pilot CVD case finding readings: Y/N

Patient consented Y

BP today taken with (equipment type)

Blood Pressure Reading –

Patient advised not diagnosing but case finding for onward referral for further assessment. Patient has consented to have a blood pressure check within their chosen community pharmacy.

Please initiate referral as part of the Hypertension Case-Finding Service Will follow up with patient call in 2 weeks to check referral and if diagnosis.

## Appendix 9: Standardised E-mail to GP

XXXXX dental practice is taking part in a national CVD case finding pilot. Your patient consented to participate in the programme and following ICB guidelines we are writing to inform you.

Date:

Patient Name:

DOB:

Patient Contact Information:

Confirm patient offered pilot CVD case finding readings: Y/ N

Patient consented Y

BP today taken with (equipment type)

Blood Pressure Reading –

### Outcomes

- High clinic BP – Referral Made to Community Pharmacy - No Action
- Very High Clinic BP – Patient advised Urgent GP appointment or 111.
- Low Clinic BP – Patient advised to see GP if symptomatic – No Action
- High/Very High Clinic BP – Patient refused onward referral or urgent care
